Nitro Wood Stain

This is a high range of solvent based stains, for interior wooden substrate specially designed to highlight the natural aspect of timber. These stains contains superior binder that enhances the appearance of natural wood, ideally suited for all types of wood new and old, previously cleaned and sanded. It can be mixed with any kind of solvents base products, nitro products, polyurethane, enamel, acrylic...

The coverage depends on the absorption of the subtract and the percentage of dilution.

2. APPLICATION METHODS

These stains can be applied by hand-held or on-line spray guns, with running spray guns, roller or by immersion. After spray application, the stains can be wiped off also with line running brushes. The amount of thinning depends on the color required, the type of application, the type of material to be stained (material, shape and size). The choice of thinners depends on the conditions of work, application, the time available and the need to limit the emission of VOC (volatile organic compound) into the air. 3. DILUTION

The product can be diluted with NC thinner, PU thinner, or white spirit (Turbentine). The dilution is related to the concentration required of the color on the wood.

The dilution is in the range of 200%. 4. DRYING at 25°C

Overspraying (according to the dilution) 10 to 15 min. Drying time for these stains depends on the type of application and no guidelines can be given.

5. SURFACE PREPARATION

The surface must be clean, dry and free from paint and varnish, all previously painted surface must be cleaned by sanding or physical abrasion.
