### Parquet paints

The timber used for parquet flooring need to be well protected. Therefore, EVI offer a wide range of parquet paints to protect the surface from the scratches and maintain a reasonable level of elasticity with the coating.

We have 2 different types of wooden parquet: the PU solvent base (2 packs), and one of the most environmental friendly products, which is the PU water base (1 pack).

### PU water base (1 pack)

When large surfaces in closed environments without appropriate ventilation needs to be coated and if such as wooden floors already laid in house, we do recommend using water based coating, it helps pressure the applicator's health and prevent the presence of strong odours for several days in the house. This product is easy to use, as it is a single pack system, versatile and ideal for brush, spray and roller application. It gives an extra ordinary hardness, transparency and absorption resistance. The maintenance is very easy and can be performed with a touch up coat with the same product. This product works as basecoat and topcoat at the same time.

*N.B: The timbers can be tinted by water-base & universal stain prior to the application of the parquet paint.*

E/1028X (0,1,2,3,4) PU clear matt water base parquet.

*\*Recommended to use for dilution is water.*

Recycle 100%

### PU solvent base (2 packs)

It is a high quality coating available with excellent gloss level, it is very elastic but tough scratch resistant. It contains slow evaporating solvents for easy application by brush and roller without bubbles, breaking and retouching problems. It forms a compact wear resistant coating even on large surfaces. It works as base coat and top coat at the same time, and it is easy to maintain.

*N.B: The timbers can be tinted by water-base & universal stain prior to the application of the parquet paint.*

E/155X (0,1,2,3,4) + E/1030

PU clear matt parquet + catalyst @100%

E/1555 + E/1012

PU clear glossy parquet + catalyst @ 100%
