Surface Preparation

It can be used on veneer substrate, solid wood, and MDF which were treated with pigmented (white) polyurethane or polyester basecoats. Apply two or more coats according to the desired covering. After drying, sand the basecoat with at least 400 type sanding paper. Ensure that no residues on the substrate before application of topcoat.

Application Method

Spray gun: Use spray gun with a 1.8 - 2.0 mm. nozzle at 3-4 atm/bar. It can be applied by air mix spray application. In the last case of preliminary test, for spray application the ideal reduction is 20-30%.

NB: The product is not suitable for airless spray application. For curtain application, it can be used for closed pore and the most important thing is to keep controlled viscosity during the vanishing, adding PU thinner to compensate the evaporation of solvent.
